LETTER OF RECOMMENDATION FOR SAHIL RAJPURKAR

TO WHOM IT MAY CONCERN

At Kidyfit Care we are developing a smart health monitoring system for babies. We needed someone who has strong electronics fundamentals, has experience working in a team with strict deadlines and has strong debugging skills.

The Robocon team of KJ Somaiya College of Engineering has talented individuals from electronics and telecommunication engineering background. One among them is Sahil Rajpurkar. I approached Sahil for helping me out with PCB design, component selection and demo prototype development. He worked with us for the duration July – December in 2019. He is far more knowledgeable when compared to his peers when it comes to micro controllers and electronics in general. You name a controller or a sensor and there are good chances he has worked with it and would soon give you the DOs and DON'Ts while using that electronic component. He is well suited to work in a core electronics company. He can be shy at times and that shouldn't be interpreted as poor communication skill. If you are rejecting him for his communication skills, believe me, you are losing out on a really good electronics engineer. Sahil gave great attention to details, to make sure that our first PCB iteration was itself perfect. We have fabricated the PCB and we have embedded it in our demo prototype.
