TO WHOM IT MAY CONCERN:

I am pleased to write this letter of recommendation for Sahil Sanjay Rajpurkar, who interned with us as an Embedded Systems Intern at Enigma Machines Private Limited from January to May 2020.

Throughout the internship, Sahil consistently demonstrated strong technical capability, a solution-oriented mindset, and a high level of professionalism. One of his key contributions was the development of custom ladder logic to automate our EPE foam lamination machinery. This tailored programming significantly enhanced the system's operational efficiency and reduced production downtime.

In parallel, he designed a Human-Machine Interface (HMI) that enabled real-time monitoring and intuitive control of the machine, which proved instrumental in simplifying operator interaction and ensuring consistent machine performance. The custom automation solution he developed addressed a key gap in local systems, aligning with client needs and earning strong positive feedback. This contributed to enhanced client satisfaction and reinforced our long-term business relationships.

Sahil Sanjay Rajpurkar was proactive, collaborative, and consistently delivered high-quality results. I am confident he will excel in any role within embedded systems or industrial automation.
